

If a conflict arises between a Clinical Payment and Coding Policy ("CPCP") and any plan document under which a member is entitled to Covered Services, the plan document will govern. If a conflict arises between a CPCP and any provider contract pursuant to which a provider participates in and/or provides Covered Services to eligible member(s) and/or plans, the provider contract will govern. "Plan documents" include, but are not limited to, Certificates of Health Care Benefits, benefit booklets, Summary Plan Descriptions, and other coverage documents. BCBSOK may use reasonable discretion interpreting and applying this policy to services being delivered in a particular case. BCBSOK has full and final discretionary authority for their interpretation and application to the extent provided under any applicable plan documents.

Providers are responsible for submission of accurate documentation of services performed. Providers are expected to submit claims for services rendered using valid code combinations from Health Insurance Portability and Accountability Act ("HIPAA") approved code sets. Claims should be coded appropriately according to industry standard coding guidelines including, but not limited to: Uniform Billing ("UB") Editor, American Medical Association ("AMA"), Current Procedural Terminology ("CPT®"), CPT® Assistant, Healthcare Common Procedure Coding System ("HCPCS"), ICD-10 CM and PCS, National Drug Codes ("NDC"), Diagnosis Related Group ("DRG") guidelines, Centers for Medicare and Medicaid Services ("CMS") National Correct Coding Initiative ("NCCI") Policy Manual, CCI table edits and other CMS guidelines.

Claims are subject to the code edit protocols for services/procedures billed. Claim submissions are subject to claim review including but not limited to, any terms of benefit coverage, provider contract language, medical policies, clinical payment and coding policies as well as coding software logic. Upon request, the provider is urged to submit any additional documentation.

Preventive Services Policy

Policy Number: CPCP006

Version: 1.0

Enterprise Clinical Payment and Coding Policy Committee Approval Date: March 23, 2022

Effective Date: April 1, 2022

Definitions

The following acronyms have been utilized throughout this reimbursement policy

ACIP: Advisory Committee on Immunization Practices
CDC: Centers for Disease Control and Prevention
FDA: United States Food and Drug Administration
HRSA: Health Resources and Services Administration

PPACA: Patient Protection and Affordable Care Act of 2010

USPSTF: United States Preventive Services Task Force

Description

Section 2713 of the Patient Protection and Affordable Care Act (PPACA) mandates that private health plans provide coverage of preventive services issued by the following agencies: The United States Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP) of the Centers for Disease Control and Prevention (CDC), and the Health Resources and Service Administration (HRSA) with respect to women's guidelines and guidelines for infants, children, and adolescents. These services are available at no cost-share when obtained by a member covered under a non-grandfathered plan. This applies to members belonging to individual, small group, large group, and self-insured plans. There is no copay, deductible or coinsurance, even if the individual or family deductible or out-of-pocket maximum has not been met as long as the member utilizes a provider in the plan's network.

Preventive care or preventive medicine refers to measures or services taken to promote health and early detection/prevention of disease(s) and injuries rather than treating them and/or curing them. Preventive care may include, but are not limited to, examinations and screening tests tailored to an individual's age, health, and family history.

PPACA does not mandate that preventive services be covered at no member cost-share when obtained out-of-network. Members that obtain preventive services out of their network will be subject to copay, deductible, and coinsurance.

Grandfathered plans are plans that have been in existence prior to March 23, 2010 and are exempt from the requirement of providing preventive services at no member cost share. Grandfathered plans have the opportunity to elect providing coverage of preventive services at no member cost share but are not required to do so.

The USPSTF applies a letter grade for each of the recommendations that are released. The grade definitions for USPSTF recommendations released after July 2012 are as follows https://www.uspreventiveservicestaskforce.org/Page/Name/grade-definitions

Following the recommendation of the USPTF coverage of Grade "A" and "B" recommendations is provided at no member cost share for members with a non-grandfathered health plan. The USPTF published recommendations can be found at

https://www.uspreventiveservicestaskforce.org/BrowseRec/Index

Grade	Definition
Α	The USPSTF recommends the service. There is high
	certainty that the net benefit is substantial.
В	The USPSTF recommends the service. There is high
	certainty that the net benefit is moderate or there is
	moderate certainty that the net benefit is moderate to
	substantial.
С	The USPSTF recommends selectively offering or providing
	this service to individual patients based on professional
	judgment and patient preferences. There is at least
	moderate certainty that the net benefit is small.
D	The USPSTF recommends against the service. There is
	moderate or high certainty that the service has no net
	benefit or that the harms outweigh the benefits.
ı	The USPSTF concludes that the current evidence is
•	insufficient to assess the balance of benefits and harms of
	the service. Evidence is lacking, of poor quality, or
	conflicting, and the balance of benefits and harms cannot
	be determined.

The ACIP publishes recommendations on the safe utilization of vaccines. ACIP's recommendations include immunization schedules for children and adolescents as well as adults which can be found at https://www.cdc.gov/vaccines/schedules/hcp/index.html. Travel Immunizations such as, but not limited to, Japanese Encephalitis, Typhoid, Yellow Fever, and Small Pox are excluded from Preventive Service coverage. Other excluded vaccinations include Anthrax, Bacille Calmette Guerin for Tuberculosis (BCG), and Rabies which are not required by PPACA. Immunizations should be administered in accordance with the ACIP Recommended Child and Adult Immunization Schedules or in accordance with state law or regulations.

HRSA releases Women's Preventive Services guidelines that are aimed at improving women's health by recommending certain preventive services that should be obtained in the clinical setting. HRSA's list of recommendations can be obtained at https://www.hrsa.gov/womensguidelines2016/index.html

HRSA endorses preventive guidelines established by the American Academy of Pediatrics for the health and well-being of infants, children, and adolescents. These recommendations are referred to as Bright Futures and the comprehensive list of Bright Future's recommendations can be found at https://www.aap.org/en-us/Documents/practicet periodicity AllVisits.pdf

Reimbursement Information:

Certain preventive care services may be considered eligible for coverage under the member's benefit plan as required by PPACA and/or an applicable state mandate. In general, these services include, but are not limited to, screenings, immunizations, and other types of care as recommended by the United States Federal Government.

These services are not subject to application of cost-sharing such as co-payments, co-insurance or deductibles when they are considered eligible for coverage and are provided by a network provider. In order for preventive claims to process at the preventive level with no member cost share, the claim must include a preventive diagnosis code, a preventive procedure code, meet medical policy review criteria, and fall within the guidelines issued by the USPSTF, ACIP, HRSA, or Bright Futures.

Health care providers (facilities, physicians and other health care professionals) are expected to exercise independent medical judgement in providing care to patients. This Preventive Services Reimbursement policy is not intended to impact care decisions or medical practice.

The following grid provides a list of the recommendations released by the USPSTF, ACIP, HRSA, or Bright Futures along with the corresponding procedure codes and diagnosis codes deemed to be preventive.

Training that added to the fall falls of the fall and the	women have access to the full range of	58671, 58340,	coverage for contraception,

female-controlled contraceptives to prevent unintended pregnancy and improve birth outcomes. Contraceptive care should include contraceptive counseling, initiation of contraceptive use, and follow-up care (e.g., management, and evaluation as well as changes to and removal or discontinuation of the contraceptive method). The Women's **Preventive Services Initiative recommends** that the full range of female-controlled U.S. Food and Drug Administration-approved contraceptive methods, effective family planning practices, and sterilization procedures be available as part of contraceptive care. The full range of contraceptive methods for women currently identified by the U.S. Food and Drug Administration include: (1) sterilization surgery for women, (2) surgical sterilization via implant for women, (3) implantable rods, (4) copper intrauterine devices, (5) intrauterine devices with progestin (all durations and doses), (6) the shot or injection, (7) oral contraceptives (combined pill), 8) oral contraceptives (progestin only, and), (9) oral contraceptives (extended or continuous use), (10) the contraceptive patch, (11) vaginal contraceptive rings, (12) diaphragms, (13) contraceptive sponges, (14) cervical caps, (15) female condoms, (16) spermicides, and (17) emergency contraception (levonorgestrel), and (18) emergency contraception (ulipristal acetate), and additional methods as identified by the FDA. Additionally, instruction in fertility awareness-based methods, including the lactation amenorrhea method, although less effective, should be provided for women desiring an alternative method.

A patient's pharmacy benefit may be managed by a company other than BCBS.

Visits pertaining to contraceptive counseling, initiation of contraceptive use, and follow-up care may also apply to procedure codes under HRSA's 'Well-Woman' recommendation

Procedure code 58340 reimbursable at the preventive level only when accompanied with modifier 33 or one of the following diagnosis codes: Z30.2, Z30.40, Z30.42, Z30.49, Z98.51,

Procedure codes 11981, 11982, and 11983 (are covered only when FDA approved contraceptive implant insertion or removal are performed) are reimbursable at the preventive level when billed with one of the following diagnosis codes: Z30.013, Z30.017, Z30.018, Z30.019, Z30.09, Z30.40, Z30.42, Z30.46, Z30.49, Z30.8, Z30.9

Procedure code 58661 reimbursable at the preventive level with a diagnosis of Z30.2

For details about pharmacy benefit coverage, contact the number on the patient's BCBS member card. A patient's pharmacy benefit may be managed by a company other than BCBS.

Prescription required for both over-the-counter (OTC) and prescription medications. For the list of contraceptive methods that

		may be covered, visit your health plan website.
Diabetes Mellitus Screening after Pregnancy	82947, 82948, 82950, 82951,	Payable with a diagnosis code in Diagnosis List 1
HRSA Recommendation	83036	
December 2019		
The Women's Preventive Services Initiative		
recommends women with a history of		
gestational diabetes mellitus (GDM) who are		
not currently pregnant and who have not		
been previously diagnosed with type 2		
diabetes mellitus should be screened for		
diabetes mellitus. Initial testing should ideally		
occur within the first year postpartum and can		
be conducted as early as 4-6 weeks		
postpartum. Women with a negative initial		
postpartum screening test result should be		
rescreened at least every 3 years for a		
minimum of 10 years after pregnancy. For		
women with a positive postpartum screening		
test result, testing to confirm the diagnosis of		
diabetes is indicated regardless of the initial		
test (e.g., oral glucose tolerance test, fasting		
plasma glucose, or hemoglobin A1c). Repeat		
testing is indicated in women who were		
screened with hemoglobin A1c in the first 6		
months postpartum regardless of the result.		
Gestational Diabetes	82947, 82948,	Payable with a pregnancy
	82950, 82951,	diagnosis
HRSA Recommendation December 2019	83036	
The Women's Preventive Services Initiative		
recommends screening pregnant women for		
gestational diabetes mellitus after 24 weeks of		
gestation (preferably between 24 and 28		
weeks of gestation) in order to prevent		
adverse birth outcomes. Screening with a 50 g		
oral glucose challenge test (followed by a 3-		
hour 100 g oral glucose tolerance test if		
results on the initial oral glucose challenge		
test are abnormal) is preferred because of its		
high sensitivity and specificity. The Women's		
Preventive Services Initiative suggests that		
women with risk factors for diabetes mellitus		
be screened for preexisting diabetes before 24		
weeks of gestation—ideally at the first		
prenatal visit, based on current clinical best		
practices.

recommends prevention education and risk	G0433, G0435,	
assessment for human immunodeficiency	G0475	
virus (HIV) infection in adolescents and		
women at least annually throughout the		
lifespan. All women should be tested for HIV		
at least once during their lifetime. Additional		
screening should be based on risk, and		
screening annually or more often may be		
appropriate for adolescents and women with		
an increased risk of HIV infection. Screening		
for HIV is recommended for all pregnant		
women upon initiation of prenatal care with		
retesting during pregnancy based on risk		
factors. Rapid HIV testing is recommended for		
pregnant women who present in active labor		
with an undocumented HIV status. Screening		
during pregnancy enables prevention of		
vertical transmission.

increased risk for sexually transmitted		
infections (STIs). The Women's Preventive		
Services Initiative recommends that health		
care providers use a woman's sexual history		
and risk factors to help identify those at an		
increased risk of STIs. Risk factors may include		
age younger than 25, a recent history of an		
STI, a new sex partner, multiple partners, a		
partner with concurrent partners, a partner		
with an STI, and a lack of or inconsistent		
condom use. For adolescents and women not		
identified as high risk, counseling to reduce		
the risk of STIs should be considered, as		
determined by clinical judgement.

Breastfeeding Equipment & Supplies

Non-grandfathered plans provide coverage of manual, electric, and hospital grade breast pumps along with breastfeeding supplies at the preventive level.

Manual breast pumps utilize procedure code E0602 and are available for purchase and covered at the preventive level when obtained In-Network, Out of Network, or from Retail providers. Sales tax is excluded from retail purchases.

Electric breast pumps utilize procedure code E0603 and must be rented or purchased from an In-Network provider or a contracted durable medical equipment supplier. The models of breast pumps being provided at the preventive level are up to the individual provider's discretion. If a member chooses to obtain an upgraded model, they may be balance billed the difference between the allowance

of the standard model and the cost of the upgraded model. Members are allowed one electric breast pump per benefit period.

*Note: Retail providers such as Target, Wal-Mart, or online vendor are not licensed medical providers and therefore are considered Out of Network. Out of network coverage will follow the out of network benefit level for preventive services. This may include cost sharing and sales tax is excluded. *

Hospital grade breast pumps utilize procedure code E0604 and are only covered when rented In-Network or from an In-Network durable medical equipment supplier. Hospital grade breast pump coverage is up to the purchase price of \$1,000.00 or 12 months, whichever comes first. At the end of coverage, the unit must be returned to the durable medical equipment supplier. Members are allowed one breast pump per benefit period.

Breast pumps obtained from Out of Network providers are reimbursable at the Out of Network level.

The following breast pump supplies are reimbursable at the preventive level. Some limitations and restrictions may apply based on the group coverage for preventive services.

- A4281- Tubing for breast pump, replacement, spare membranes, replacements
- A4282- Adapter for breast pump, replacement
- A4283- Cap for breast pump bottle, replacement
- A4284- Breast shield and splash protector for use with breast pump, replacement
- A4285- Polycarbonate bottle for use with breast pump, replacement
- A4286- Locking ring for breast pump, replacement

<u>Differentiating Preventive Care versus Diagnostic Care</u>

The following types of services are considered Preventive:

- Screenings intended to prevent illness or identify issues before symptoms are evident
- Counseling intervention as defined by a specific preventive recommendation

Examples of preventive services:

- A 60-year-old woman obtains her biennial mammogram to screen for breast cancer
- A patient who has been identified as having cardiovascular disease risk factors is referred for nutritional counseling
- A 50-year-old patient obtains a colonoscopy to screen for colorectal cancer
- A 42-year-old patient goes to their doctor for their annual physical and receives a blood test to screen for abnormal blood glucose

The following types of services are considered Diagnostic:

- The diagnosis of existing symptoms or abnormalities
- Treatment for specific health conditions, ongoing care, or other tests to manage a health condition

Examples of diagnostic services:

- A 60-year-old woman obtains a mammogram after noticing a lump in her breast
- A patient diagnosed with diabetes is referred for nutritional counseling to manage their condition
- A patient goes to their doctor for their annual physical and receives a blood test to check iron and liver function, and a urinalysis is requested

Limitations and Exclusions

- 1. <u>Services not reimbursable at the preventive level may be reimbursable under another portion of the medical plan.</u>
- 2. Breastfeeding equipment and supplies not listed underneath the "Breastfeeding Equipment and Supplies" section. This includes, but is not limited to
 - a. Batteries
 - b. Breastfeeding ointments, creams
 - c. Breast milk storage supplies including bags, freezer packs, etc.
 - d. Breast pump cleaning supplies
 - e. Breast pump traveling cases
 - f. Infant scales
 - g. Nursing bras
 - h. Nursing covers, scarfs
- 3. Immunizations that are not published in the Center for Disease Control's Morbidity and Mortality Weekly Report (MMWR) and/or are not on the list of "Vaccines Licensed for Use in the United States" by the United States Food and Drug Administration (FDA).
- 4. Prescription coverage may vary depending on the terms and conditions of the plans. A prescription may be required for coverage under the pharmacy benefit. The plan may also require that the generic drug be tried first before the brand version. Age limits, restrictions, and other requirements may apply. Members can verify their pharmacy benefits by calling the customer service number on the back of their ID card.
- 5. For OTC purchases, members will need to obtain a prescription from their provider and take it to the pharmacy to be filled.
- 6. Exceptions may apply, members can verify their pharmacy benefits by calling the customer service number on the back of their ID card.
- 7. If there is a medication not included, the member should consult their doctor for therapeutic alternatives first before submitting coverage exceptions to BCBS.

Each benefit plan, summary plan description or contract defines which services are covered, which services are excluded, and which services are subject to dollar caps or other limitations, conditions or

exclusions. Members and their providers have the responsibility for consulting the member's benefit plan, summary plan description or contract to determine if there are any exclusions or other benefit limitations applicable to this service or supply. If there is a discrepancy between a MEDICAL POLICY and a member's benefit plan, summary plan description or contract, the benefit plan, summary plan description or contract will govern.
